

Prometheus AI Crypto Bot

One-Page Cheat Sheet

Connect in 5 steps

1. Open app, set a **PIN**.
2. Create an exchange **API key** (trading on).
3. Paste **Key + Secret**, pick exchange + **Spot/Futures**.
4. **Connect** with **Safe Mode** ON.
5. Activate licence (**Free Trial** or token), pick a **preset**, go.

API key - get this right

- Enable **Reading + Spot** (or **Futures**).
- Whitelist your IP: **Show my IP** -> **Copy** -> paste on exchange.
- **Passphrase** needed: OKX, KuCoin, Bitget.
- **USA**: use **Binance.US** (not binance.com).

Strategy & presets

- **EMA20 + RSI-50** crossover - trades **long + short**.
- Presets: **Conservative / Balanced / Aggressive** (one click).
- **Advanced**: trend EMA, ATR stop, TP1/TP2, trailing, ADX.
- Set Symbols + Timeframe; trades only when licensed + connected.

Connect & License

- **Connect & License** tab -> **Start Free Trial** or paste token.
- Optional webhook: Strategy filter = **Prometheus**.
- No TradingView / ngrok needed.

Chart / Backtest / Analytics

- **Chart**: candles, EMAs, RSI, volume + BUY/SELL markers.
- **Backtest**: Spot = long-only, Futures = long + short; optimizer + walk-forward; vs buy & hold.
- **Analytics**: win rate, profit factor, equity curve, CSV.

Key settings

- Trade Size in coin or USDT (\$); Sizing: Fixed / Fixed \$ / Risk %.
- Auto **TP1/TP2** scale-out; live **order preview**.
- **Guardrails**: daily loss/profit, max positions, exposure cap, cooldown, dedupe, loss-streak, drawdown, hours.
- **Pause new entries**, trailing stop, slippage guard, >10x warns.
- **Close %** banks a winner; **PANIC: Close All** flattens.
- Alerts: Sound / Desktop / **Telegram** + daily P&L.

Gear, test & 24/7

- **Gear**: Change PIN, Lock, text size, open data folder / log.
- **Test Signal**: fake BUY through the real pipeline (sim in Safe Mode).
- **Run on startup + Minimize to tray** = unattended 24/7.

Fees & quick fixes

- ~**0.1%** per fill (~0.2% round trip); keep **TP > 0.25%**.
- Insufficient balance -> lower size / use Risk %.
- -2015 / invalid key -> enable trading + whitelist IP.
- 451 -> Binance.US / other / no VPN. \$0 -> wrong wallet.
- no market symbol -> pick the pair from the dropdown.

Safety: IP whitelisted - test in Safe Mode - trade small. Real money when Safe Mode is off.
